Summary

I am a Software Developer from the beautiful country of Indonesia. I specialize in building web and server environments. My favorite tools for server development are Go, and for UI, it's Svelte. However, I'm not limited to them alone; I feel comfortable stepping outside my expertise as I believe I can adapt quickly and am eager to learn more.

Why I might be worth considering

- 1.: I have 100+ repositories on Github.
- 2.: I have a B+ score with a total of 3.5K commits on Github.
- 3.: I have recorded 2000+ coding hours on Wakatime.
- 4.: I develop using Linux, WSL, & Neovim every day.

Professional Experience

Commsult Indonesia

Software Development Engineer in Test (Intern)

October 2023 - April 2024

- Developing and maintaining automated testing scripts using tools like WebdriverIO to ensure product application functionality and stability.
- Designing and implementing comprehensive testing plans and strategies to validate software features and functions.
- Collaborating with software development teams to identify and resolve issues early in the development process, resulting in faster release cycles and product quality improvement.

Sagara Technology

Backend Technology Trainee

July 2023 - November 2023

- Assisting senior backend technicians in designing and implementing scalable and efficient backend systems.
- Actively participating in learning opportunities and workshops to expand technical skills and stay abreast of industry trends and best practices in backend techniques.

Education

President University

Bachelor of Computer Science

Cikarang, Indonesia

July 2021 - Present

Key Skills

Backend Development: Expert

Frontend Development: Proficient

Docker & Server Knowledge: Competent

Database: Competent

Achievements

October 2019: National Level 3 Web Programming Competition

Certification

Dicoding Academy

Certification of Completion Android Developer Class

January 2020

Software Projects

Resqiar.com

github.com/resqiar/resqiar.com

September 2023

- My personal website developed for project showcases, blogs, courses, community sharing, and more.

github.com/resqiar/api.resqiar.com

- Server supporting the resqiar.com web application built using Golang Fiber.

Algorithm Visualization

September 2023 - July 2022

resqiar.github.io/algo-visualization

- Visualizing numerous famous algorithms for exhibition and learning purposes.

Binder (Binder Extension Project)

March 2024

github.com/resqiar/binder

- My personal binder extension. Used to store additional data to organize my binder books.

github.com/resqiar/anime-recommender

- Using collaborative filtering to provide recommendations based on user similarity scores.

Reslang (Building My Own Programming Language)

August 2023

github.com/resqiar/reslang

- Isn't it fun to build your own programming language? In the learning process, so the code will remain messy.
